

FATIMA TAHIR

Software Engineering Student · Full Stack Developer · AI/ML Engineer

Lahore, Pakistan +92 (312) 452-8858 fatimahtahir452@gmail.com [linkedin.com/in/fatima-tahir-a77182336](https://www.linkedin.com/in/fatima-tahir-a77182336) github.com/FatmaTahir

PROFESSIONAL SUMMARY

Motivated Software Engineering student skilled in React.js, ASP.NET Core, and RESTful APIs. Strong focus on clean code and scalable backend architecture. Complemented by a solid foundation in AI/ML, including end-to-end pipelines with Scikit-learn, TensorFlow, and classical ML model evaluation, enabling integration of intelligent features into real-world applications. Experienced in Agile workflows, project scoping, and delivering solutions aligned with business goals. Eager to join a collaborative team where I can ship impactful products and grow alongside experienced engineers.

TECHNICAL SKILLS

Languages: C, C#, C++, Python, JavaScript (ES6+), SQL, HTML, CSS

Frontend: React.js, Blazor, Tailwind CSS, Bootstrap, jQuery, Framer Motion

Backend & APIs: .NET 8, ASP.NET Core, RESTful APIs, AJAX

Database: MySQL

ML & AI: Machine Learning, Deep Learning, NLP, Neural Networks, Classification, Feature Engineering, Model Training & Evaluation

ML Frameworks: TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn

AI Foundations: Probabilistic Reasoning, Bayesian Inference, Markov Models, Search Algorithms, CSP, Knowledge Representation, Heuristic Search

Developer Tools: Docker, Postman, Swagger, Jira, Google Colab, Kaggle, VS Code, Jupyter Notebook

Testing: xUnit, Appium

Version Control: Git, GitHub

PM & Process: Agile, SDLC, WBS, Risk Management, Scope & Requirements Analysis, Jira, Trello, Notion, ClickUp

EDUCATION

BS Software Engineering

2023 – 2027

Punjab University College of Information Technology | CGPA: 3.10

FSc (Intermediate)

2021 – 2023

Government Girls Higher Secondary School | 1017/1100

PROJECTS

MediBlood-Connect – ASP.NET MVC, SQL, jQuery, AJAX, SignalR

- Built a real-time blood donor-patient matching platform with live notifications using SignalR, supporting 3 user roles with policy-based authorization
- Architected a modular MVC backend across 15+ pages with RESTful endpoints and ASP.NET Identity authentication
- Designed a normalized SQL schema across 5 core tables applying SOLID principles and separation of concerns
- Source: github.com/FatmaTahir/MediBlood-Connect

MoodMemo – React.js, Tailwind CSS, React Router DOM, React Icons

- Built a responsive mood-tracking and journaling single-page application using React.js with multi-page navigation implemented via React Router DOM
- Developed reusable functional components with React Hooks (useState, useEffect) for managing emoji-based mood selection, note creation, deletion, and automatic timestamping
- Implemented client-side data persistence using localStorage and a mobile-first UI with Tailwind CSS utility classes for consistent cross-device user experience
- Source: github.com/FatmaTahir/Notes-taking-app

Human Activity Recognition System – Python, Scikit-learn, NumPy, Pandas, Matplotlib

- Achieved 92% accuracy with Random Forest by training and evaluating 5 ML models (SVM, KNN, Decision Tree, Logistic Regression, Random Forest) on 10,000+ smartphone sensor readings
- Benchmarked classical ML models against deep learning architectures (LSTM, CNN) for classifying 6 human activity classes from raw accelerometer/gyroscope time-series data
- Built end-to-end ML pipeline covering data preprocessing, feature extraction, model training, hyperparameter tuning, and performance visualization using Matplotlib
