FATIMA TAHIR

Full-Stack .NET Developer

Lahore, Pakistan fatimahtahir452@gmail.com GitHub LinkedIn Portfolio

PROFESSIONAL SUMMARY

Motivated Software Engineering student and **.NET Developer** with hands-on experience building, securing, and deploying full-stack web applications and RESTful APIs. Proficient in **.NET 8, ASP.NET Core (MVC & Web API), Clean Architecture, EF Core, Dapper micro-ORM**, and SQL Server, integrated with modern React.js frontends. Demonstrated track record of architecting production systems on **Azure App Service**, implementing JWT and role-based authorization, optimizing database query performance, and applying SOLID principles across the SDLC. Eager to leverage strong backend architecture skills in a challenging .NET and Full Stack Engineering role.

EDUCATION

BS Software Engineering 2023 – 2027

Punjab University College of Information Technology (PUCIT)

FSc Pre-Engineering 2021 – 2023

Government Girls Higher Secondary School

TECHNICAL SKILLS

Languages: C#, C++, SQL, JavaScript (ES6+), Python

Backend: .NET 8, ASP.NET Core (MVC & Web API), Entity Framework Core, Dapper micro-ORM, RESTful APIs, Clean Architecture, Microservices, Repository Pattern, Middleware, Dependency Injection, SignalR, JWT Authentication, ASP.NET Core Identity, AJAX, CORS

Frontend: React.js, Blazor, Bootstrap 5, Tailwind CSS, AJAX, jQuery, Framer Motion, Vite

Databases: PostgreSQL, SQL Server, Azure SQL Database

DevOps & Tools: Git, GitHub, Azure App Service, Docker, Vercel, Postman, Swagger, GitHub Actions (CI/CD)

CS Fundamentals: Data Structures, Algorithms, Object-Oriented Programming, Software Design Patterns, Problem Solving, Debugging

Testing: Unit Testing, Integration Testing, Postman API Testing

PROJECTS

MediBlood-Connect – ASP.NET MVC, Azure SQL, Dapper, EF Core, SignalR, Azure App Service GitHub | Live

- Engineered and deployed a production-grade blood donation portal on **Azure App Service** and **Azure SQL**, processing patient-donor matches across 3 role-based portals (Donor, Patient, Admin).
- Implemented a hybrid data access layer combining **Entity Framework Core** (Identity & migrations) with **Dapper micro-ORM** for parameterized queries, cutting search query execution times by over 35%.
- Architected role- and policy-based access control using ASP.NET Core Identity, securing donor availability toggles, blood request submissions, and administrative approvals.
- Designed a 4-table normalized Azure SQL Database schema, applying Repository Pattern and Dependency Injection to enforce strict separation of concerns and 100% parameterized SQL injection prevention.
- Integrated real-time notification workflows via SignalR and established automated deployment pipelines directly from GitHub to Azure cloud infrastructure.

Scriblia – Full Stack Stationery E-Commerce Platform – React.js, ASP.NET Core Web API, EF Core, SQL Server, JWT, Vercel, Azure GitHub | Live

- Architected a full-stack e-commerce web platform serving 15+ RESTful API endpoints using ASP.NET Core Web API, Entity Framework Core, and Azure SQL Server.
- Developed a responsive React frontend hosted on Vercel, featuring category filtering, instant search, product image zoom, and smooth Framer Motion page transitions.
- Secured user operations with JWT authorization and ASP.NET Identity, enforcing role-based access for registration, login, and protected checkout operations.
- Implemented stateful shopping cart and checkout modules with automated inventory deduction, managing transactional data consistency across 4 core database tables.
- Engineered end-to-end admin CRUD functionality for real-time product listing, catalog updates, and order fulfillment status updates.

StudyPilot – An AI-Driven Socratic Learning and Parent Analytics Platform (FYP - Ongoing) – .NET, LangChain, PostgreSQL, OpenAI API GitHub | Prototype

- Architecting an AI-driven educational platform designed for personalized socratic learning and parent monitoring analytics.
- Developing RESTful API endpoints in ASP.NET Core Web API (.NET 8) with Entity Framework Core to manage user profiles, task scheduling, and learning analytics.
- Integrating Machine Learning and NLP models (Python/Scikit-learn) to analyze student performance metrics, predict focus bottlenecks, and adapt study plans dynamically.
- Building an interactive React.js dashboard with Tailwind CSS to track learning progress, deadline urgency, and daily study streak metrics.
- Implementing JWT-based authentication and secure data pipelines between the React frontend, .NET backend, and ML inference service.
